

Reference Image - Banff Example

- **Horizon Line:** A horizontal line representing the viewer's eye level.
- **Vanishing Points:** A point on the horizon line where receding lines appear to converge.
- **Perspective Lines:** Lines that recede towards the vanishing point, creating the illusion of space.
- **Vertical Lines:** Vertical lines in a one-point perspective drawing remain vertical and are parallel to each other.
- (However may warp inwards on wide angle camera or phone lenses, as in this example.)
- **Horizontal Lines:** Horizontal lines remain parallel to the horizon line.

One point perspective, objects must be oriented parallel to the picture plane.

Exercise 1

One point perspective, objects must be oriented parallel to the picture plane.

- **Horizon Line:** A horizontal line representing the viewer's eye level.

- **Vanishing Points:** A point on the horizon line where receding lines appear to converge.

- **Perspective Lines:** Lines that recede towards the vanishing point, creating the illusion of space.

- **Horizontal Lines:** Horizontal lines remain parallel to the horizon line.
- **Vertical Lines:** Vertical lines in a one-point perspective drawing remain vertical and are parallel to each other.

- **Horizon Line:** A horizontal line representing the viewer's eye level.

- **Vanishing Points:** A point on the horizon line where receding lines appear to converge.

- **Perspective Lines:** Lines that recede towards the vanishing point, creating the illusion of space.

- **Vertical Lines:** Vertical lines in a one-point perspective drawing remain vertical and are parallel to each other.
