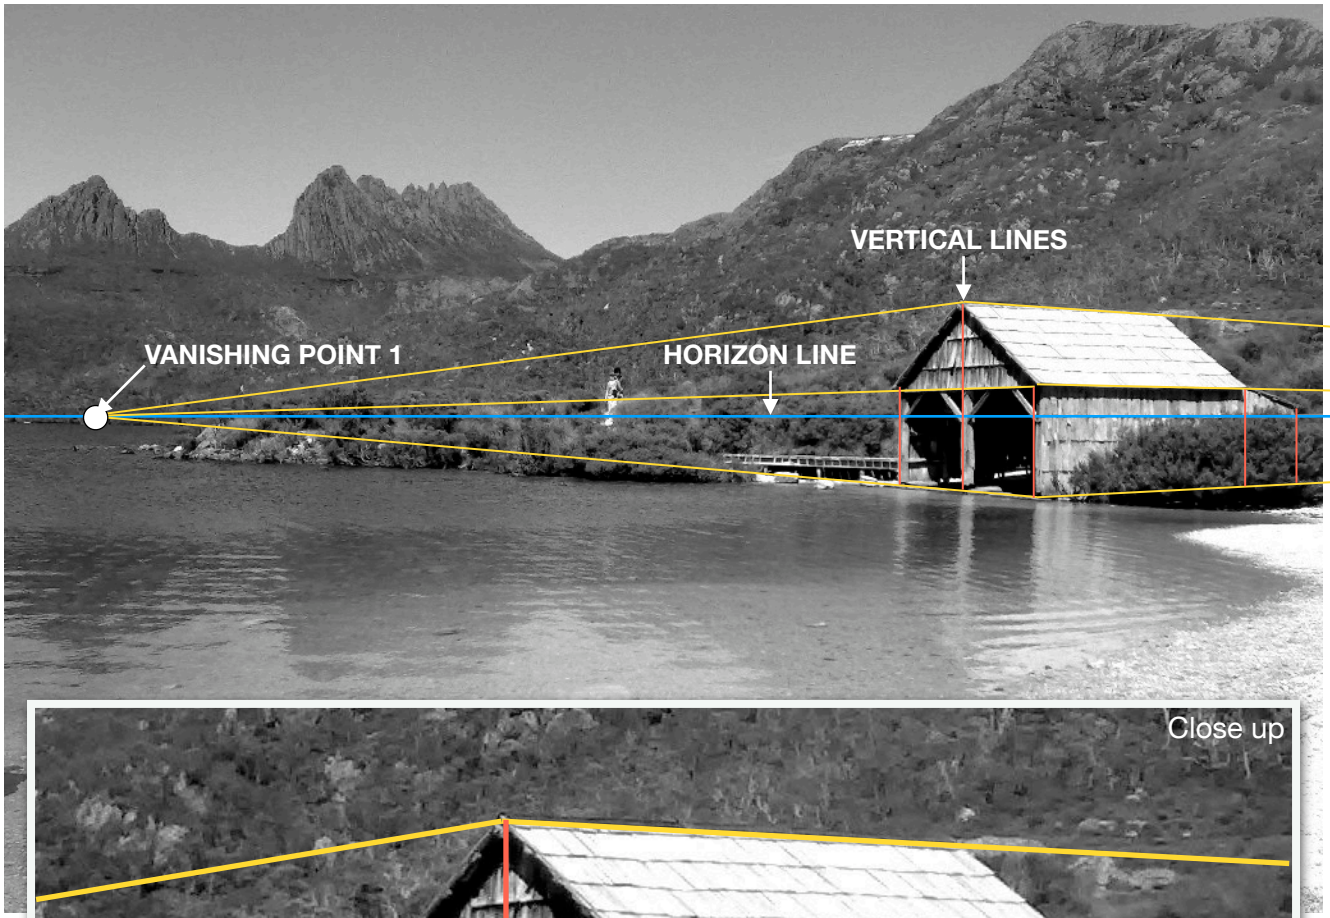
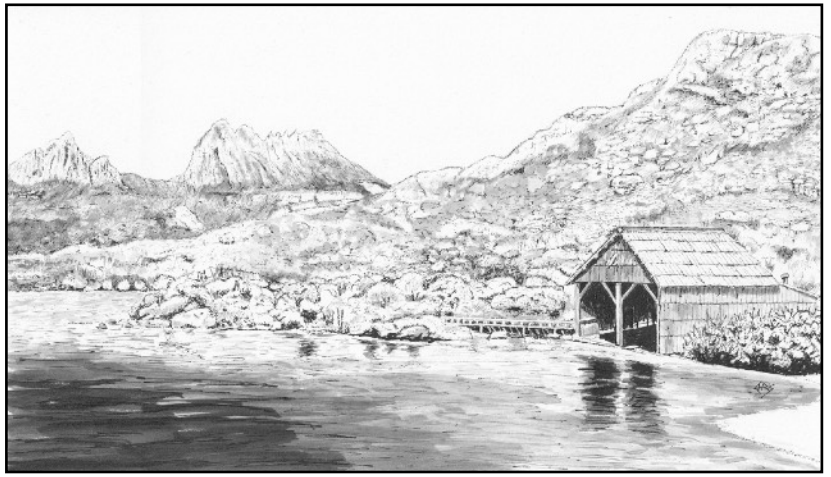
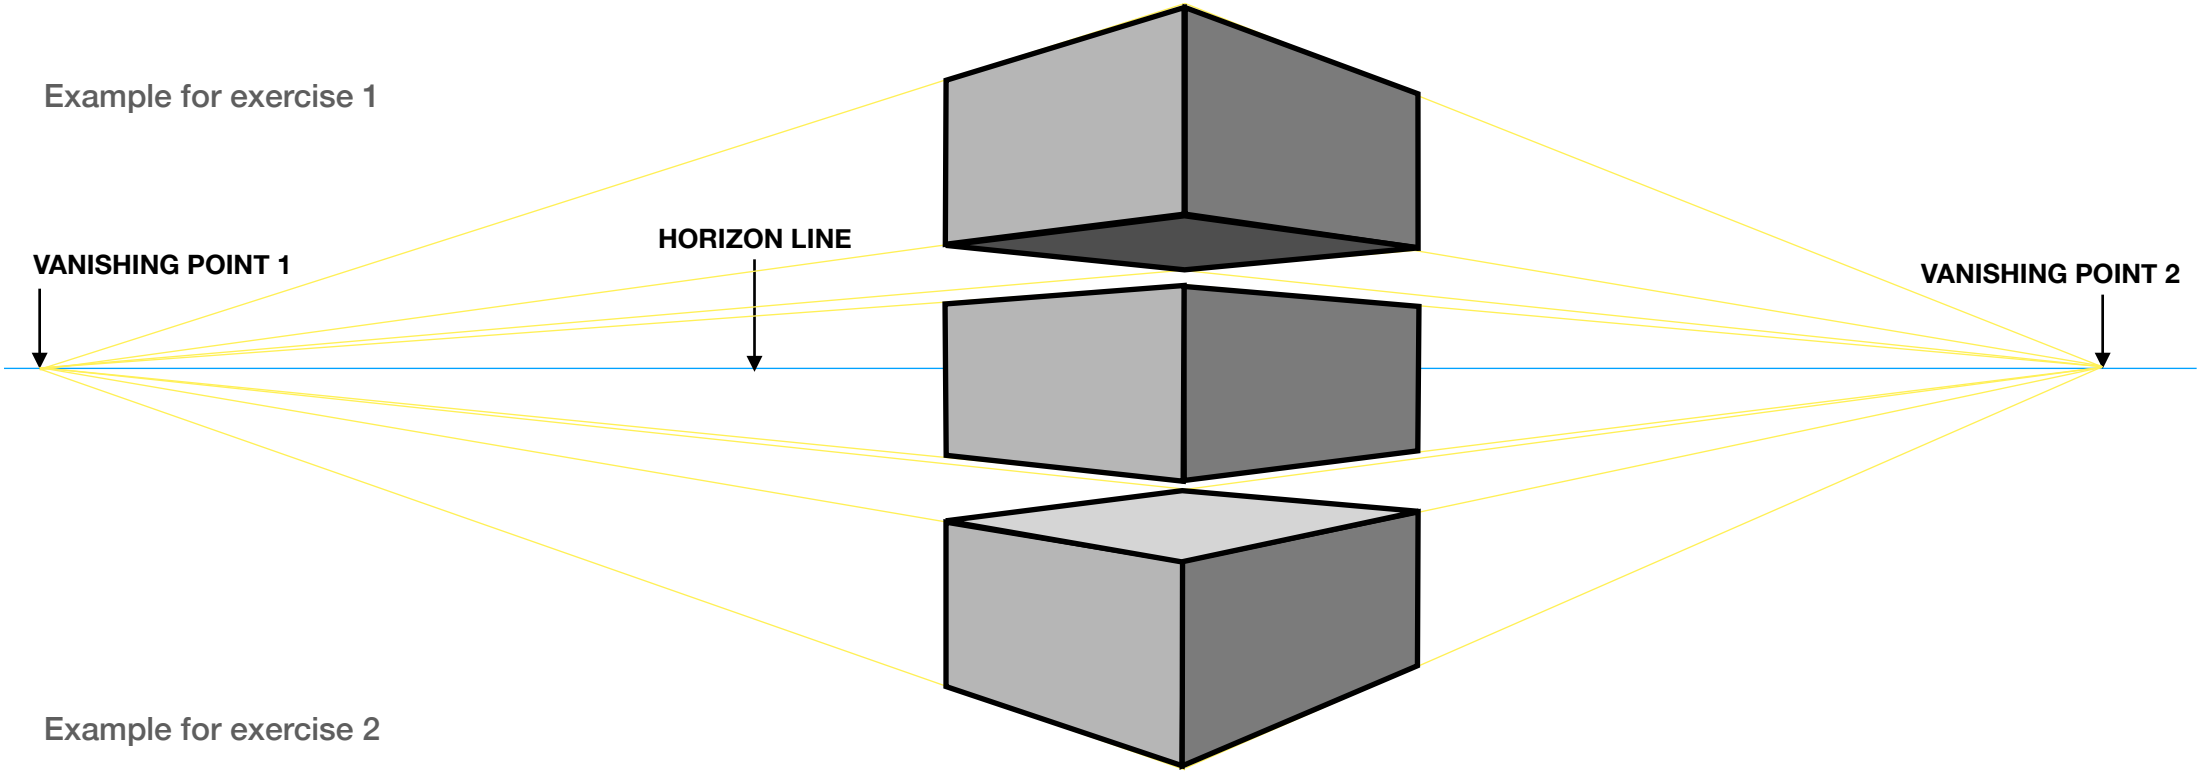
# 2 Point Perspective



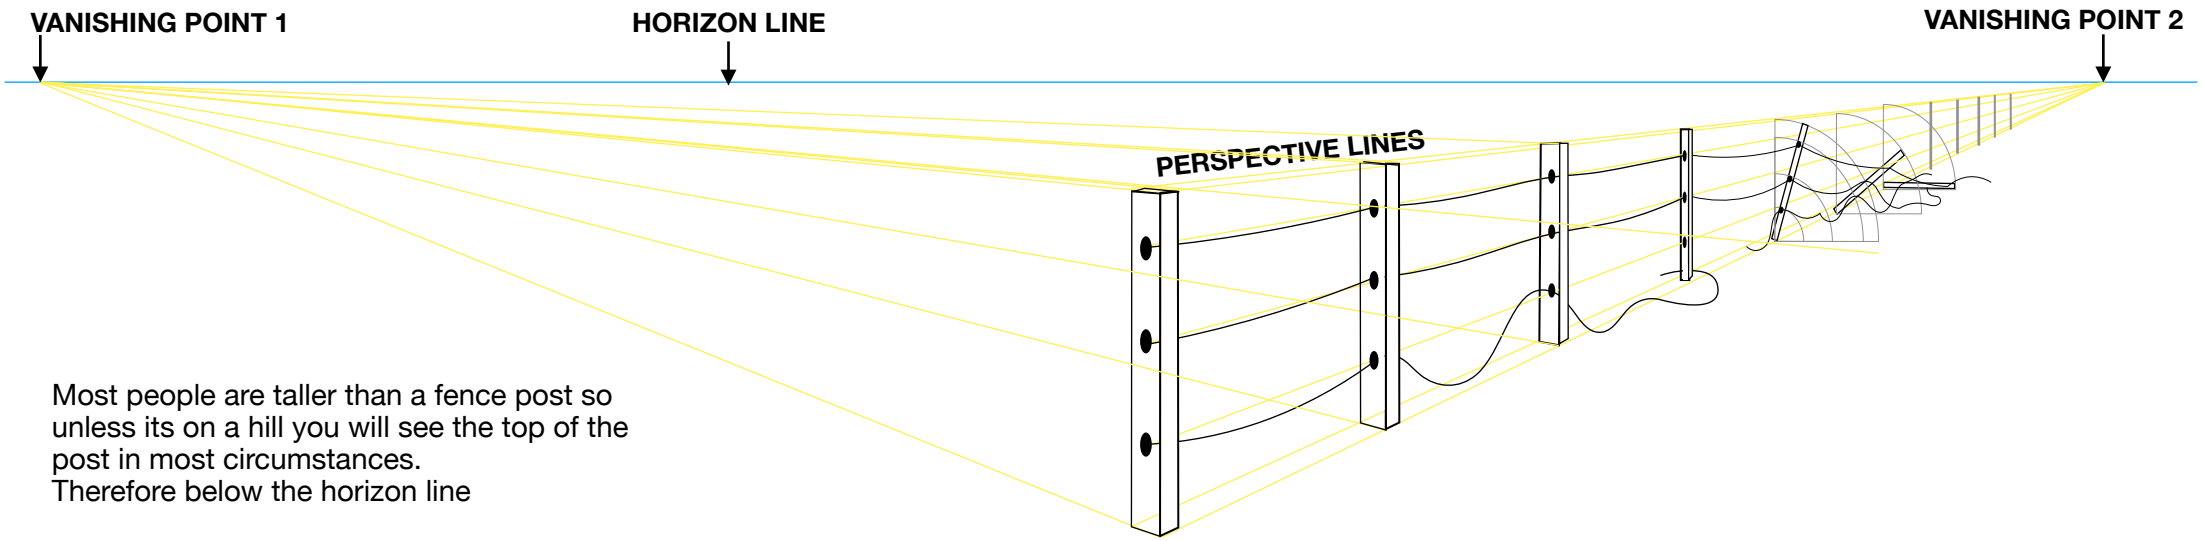


- **Horizon Line:** A horizontal line representing the viewer's eye level.
- **Vanishing Points:** Two points on the horizon line where receding lines appear to converge.
- **Perspective Lines:** Lines that recede towards the vanishing points, creating the illusion of space.
- **Vertical Lines:** Vertical lines in a two-point perspective drawing remain vertical and are parallel to each other.
- **Horizontal Lines:** Horizontal lines converge towards one of the two vanishing points, adding depth to the drawing.

Example for exercise 1



Example for exercise 2



Most people are taller than a fence post so unless its on a hill you will see the top of the post in most circumstances.
Therefore below the horizon line

- **Horizon Line:** A horizontal line representing the viewer's eye level.
- **Vanishing Points:** A point on the horizon line where receding lines appear to converge.
- **Perspective Lines:** Lines that recede towards the vanishing point, creating the illusion of space.
- **Vertical Lines:** Vertical lines in a two-point perspective drawing remain vertical and are parallel to each other.
